

Technical Product Bulletin

Number: DJTPB003

Name:	Fire Suppression Splitter
Application:	Sprinkler head for a fire protection system commonly used in commercial and industrial buildings.
Description:	The splitter is a critical component to the sprinkler head. It interrupts the water flow by converting the water stream to a controlled spray that covers a specified area.
Dimensions:	1 inch overall length by .482 inch diameter.
Material:	1/2 hard 360 Brass.
Tolerances:	± .003 inch with some dimensions held to .001 inch total tolerance.
Finishes:	No special finish
Fabrication:	Single spindle Swiss screw machine.
Special Features:	Compound angles at spray point critical to convert the solid stream of water to a controlled spray.
